

STATEMENT OF DECLARATION ON ARTIFICIAL INTELLIGENCE USE

In adherence to the university policy on the use of **Artificial Intelligence (AI) for Research Projects, Creative Works, Thesis, and Dissertations** (E.O. 46, 2024), the researchers have outlined the usage of AI in the final project for the Data Structures and Algorithms course from December 28, 2025, to January 10, 2026.

I. UTILIZATION OF AI TOOLS AND SYSTEMS

The following AI Tools and Systems were used in this final project:

- 1. Google Gemini:** These AI Models were used as they gave the researchers access to more advanced and in-depth analysis and results of desired prompts, such as code debugging and refactoring for better readability: summarizing the overview of program files for presentation and assisting in the writing of the documentation and project description in the [Readme.md](#) file.
- 2. GitHub Copilot:** This AI Model was used because it provides researchers with easier bug recognition during program development. It was also utilized to generate concise and descriptive commit messages directly within the GitHub interface.

II. RATIONALE FOR AI TOOLS AND SYSTEMS USE

- 1. Google Gemini 3 Pro:** This language model was applied as it offers a deeper understanding and output of prompts through its access to its Pro model as a part of their free 1-year trial for students.
- 2. GitHub Copilot:** This language model was applied as it provided convenience when committing and bug recognition. It is also a built in feature in gitHub website.

III. ACKNOWLEDGMENT OF ACCOUNTABILITY IN AI USE

The researchers acknowledge the imperative of accountability and responsibility for potential unintended consequences or errors arising from AI use. Consequently, conclusions will be retracted should AI-induced errors be identified within the final project.

Consistent verification of AI-generated outputs was conducted, ensuring accuracy and reliability for the final project through rigorous prompt review and model correction before implementation.

Furthermore, the research team maintained continuous awareness of recent updates and developments pertaining to the utilized AI models to preemptively address potential performance issues that might impact the final project. To facilitate reproducibility, this declaration is included in the submitted GitHub repository.
